COMMERCIAL & TECHNICAL PROPOSAL

Next-Generation Pipeline Diagnostics & Pigging Commercial Platform

An end-to-end pipeline and utility integrity ecosystem (B2B + B2C)

PREPARED BY

PREPARED FOR

Executive Leadership, Investors &

Commercial Stakeholders

DATE

October 31, 2026

Proposal validity: 30 days

01 Executive Summary

This proposal sets out the design, build, and commercialization plan for a **unified digital platform for pipeline inspection, pigging, and utility diagnostics**. It serves two markets that legacy providers have left underserved: heavy industrial pipeline operators (B2B) and light commercial, municipal, and residential line owners (B2C).

$11B+	9	3 months	NGN 5M
Global market size	Revenue streams (5 B2B, 4 B2C)	Development to go-live	Fixed development fee

The opportunity: incumbents sell through sales reps, PDFs, and 6 to 18 month cycles. A self-service platform with instant data triage, a vendor-agnostic digital twin, and a transparent marketplace can win customers they cannot serve.

02 Strategic Vision & Value Proposition

The global pipeline inspection, pigging, and utility diagnostics sector is an **$11+ billion market**, fractured into two extremes:

- **The ultra-heavy industrial sector (B2B):** served by legacy giants (**GE / Baker Hughes**, **GeoCorr**, and **Enduro Pipeline Services**), which run slow, expensive, and opaque business models.
- **The light commercial and consumer sector (B2C):** millions of miles of municipal water networks, commercial industrial park piping, estate drainage, and private sewer mains are neglected because existing industrial tools are too bulky, proprietary, and cost-prohibitive.

Our Core Mission

To build the world's first **unified end-to-end digital ecosystem** that solves these industry bottlenecks while creating a multi-tiered **revenue engine across both B2B and B2C markets**.

03 Market Gaps in Legacy Systems

A review of the current market leaders reveals clear digital and operational gaps that this platform is engineered to capture.

Existing Provider	Current Gaps	Our Solution
GE / Baker Hughes (ge.com / waygate.com)	Static brochureware, gated sales reps, 6–18 month sales cycles, 12-week data backlogs	Instant self-service SaaS; automated ILI data ingestion; instant AI report generation
GeoCorr (geocorr.com)	Niche MFL/Caliper inspection; reports delivered as static PDFs; zero digital commerce	Vendor-agnostic data viewer; 4D digital twin comparing multi-year runs
Enduro (enduro.com)	Legacy catalogue PDFs; phone/email RFQs; no online inventory or tool leasing	Dynamic Sizing Configurator; direct e-commerce checkout; on-demand tool rental hub
Consumer & Municipal Utilities (B2C)	Ignored by major players; owners forced to blind-dig at $5k–$15k per repair	Prosumer diagnostic rental; AI video/acoustic triage; verified contractor bidding

Specific Flaws We Are Exploiting

- **Zero self-service e-commerce:** On enduro.com or ge.com, an operator cannot see pricing, configure a custom polyurethane scraper pig by pipe schedule, or check tracking transmitter availability. Orders still run on phone calls and manual purchase orders.
- **The “data black hole” (4 to 12-week wait):** After an Inline Inspection (ILI) run, gigabytes of sensor data (MFL, Caliper, IMU) go to proprietary analysts. Operators wait 1 to 3 months for a static 600-page PDF while undetected corrosion and micro-cracks keep degrading under operating pressure.
- **No cross-vendor run comparison:** Operators switch vendors over a 10-year period, yet GeoCorr’s format does not talk to Baker Hughes’ format. There is no automated way to overlay a 2021 run against a 2026 run to calculate exact Corrosion Growth Rates (CGR).
- **Exclusion of B2C and light commercial infrastructure:** No major player serves district commercial pipes, municipal water bypasses, or residential lateral lines. Low-resolution plumbing cameras cannot map coordinates, which leads to destructive, blind excavations.

04 Revenue Model

The platform is built as a **high-margin revenue generator** that monetizes data, transactions, physical assets, and marketplace liquidity.

B2B Revenue Streams	B2C & Light Commercial Revenue Streams
• Mileage-based SaaS subscriptions • Pay-per-run automated AI triage fees • Marketplace take-rate (parts and pigs) • Tool tracking and smart tool rentals • Supplier enterprise listing subscriptions	• Hardware rental and deposit flow • Automated AI video defect reports • Contractor referral fees (10%) • Homeowner subscription (“LineAssure” escrow)

A. B2B Commercial Revenue (High-Ticket & Enterprise ARR)

1. “PipelineAI” Integrity SaaS Subscriptions

- **How it works:** Midstream pipeline operators, refineries, and municipal gas/water systems pay an annual subscription to manage, monitor, and visualize their pipeline assets.
- **Pricing:** tiered by mileage monitored (**$20 – $40 per mile per year**).
- **Revenue impact:**
  - Small regional operator (500 miles): **$15,000 ARR**.
  - Mid-tier operator (3,000 miles): **$90,000 ARR**.
  - Enterprise transmission operator (10,000 miles): **$300,000+ ARR**.
- **Gross margin: 85% – 90%** (cloud-hosted software).

2. Pay-Per-Run Automated ILI Data Triage Fee

- **How it works:** Operators upload raw survey files (LAS, CSV, or raw binary sensor logs from GeoCorr, Enduro, or Baker Hughes). The engine parses sensor readings, performs ASME B31G calculations, and returns an interactive 3D heatmap and anomaly triage in hours instead of 8 weeks.
- **Pricing:** flat fee of **$5,000 – $20,000 per ILI data set**, depending on pipe length and sensor channel density.
- **Advantage:** Legacy providers charge $40,000–$100,000+ for manual analyst processing. We deliver 90% of the triage at a fraction of the cost within 24 hours.

3. B2B Marketplace Commissions (Take-Rate)

- **How it works:** Operators, drilling firms, and municipal utilities order cleaning pigs, scraper discs, polyurethane cups, batching spheres, and pig-signalers through the **Smart Sizing Configurator**.
- **Pricing: 8% – 15% commission** on every transaction fulfilled by verified manufacturing partners (including distributors of Enduro and regional molding facilities).
- **Revenue impact:** average order is **$5,000 – $45,000**, for a net commission of **$500 – $5,400** per order.

4. Hardware-as-a-Service (HaaS) & Tracking Equipment Rental

- **How it works:** Operators rent acoustic geophones, electromagnetic pig tracking transmitters, and caliper sizing tools for one-off runs instead of buying expensive hardware.
- **Pricing: $800 – $2,500 per week** plus tracking service fees.

5. Manufacturer Premium Subscriptions

- **How it works:** Manufacturers and molders pay for verified catalog placement, priority quotation routing in the Configurator, and integration with customer RFQs.
- **Pricing: $1,500 – $5,000 per month** per manufacturer account.

B. B2C & Light Commercial Revenue (High Volume & Fast Cashflow)

This side of the platform captures commercial real estate, HOAs, municipal water works, small plumbing contractors, and residential property owners.

1. Prosumer Diagnostic Kit Rentals ("Drop-Ship Diagnostics")

- **How it works:** Facility managers or homeowners facing recurring backups rent a compact acoustic/gyroscope tracker or mini-inspection kit, shipped in a ruggedized case.
- **Pricing: $199 – $399 per 48-hour rental**, plus a security deposit hold.
- **Customer value:** saves the standard $1,500–$3,500 contractor diagnostic charge.

2. Instant AI Video/Acoustic Defect Report

- **How it works:** Plumbers or owners upload camera inspection videos or acoustic logs. The computer vision engine identifies:
  - The exact foot-marker of pipe collapse, root intrusion, or bellied pipe.
  - An instant, unalterable "Health of Line" Certificate.
- **Pricing: $49 – $99 per processed report**.

3. Contractor Job Bidding & Referral Commissions (10%)

- **How it works:** Once a defect is mapped with GPS coordinates and depth, the platform pushes the pre-scoped job to vetted trenchless pipe-lining and excavation contractors.
- **Pricing: 10% success fee on total project value** (or a minimum $200 lead conversion fee).
- **Revenue impact:** average sewer lining projects run **$4,000 to $18,000**, earning **$400 – $1,800** per closed repair.

4. "LineAssure" Escrow & Warranty Fee

- **How it works:** Payments between consumers/property managers and contractors are held in milestone escrow, released only when post-repair inspection video confirms zero leaks.
- **Pricing: 2.5% payment processing and escrow protection fee**.

05 Application Workflow & Innovation

User Journeys

B2B Operator Journey

1. Sizing Calculator	2. One-Click Order	3. Real-Time Tracking	4. Upload Run Data
Selects 24" pipe, ANSI 600, sour gas.	Custom scraper discs dispatched.	Pig passing logged via offline field app.	Instant 3D triage, CGR and ASME B31G calculation.

B2C / Commercial Owner Journey

1. Line Issue Detected	2. Upload Video / Rent Kit	3. AI Analysis	4. One-Click Bidding
Drain backup in a commercial estate.	Uploads snake camera footage to the portal.	GPS depth and root defect pinpointed.	Vetted contractors bid; escrow checkout.

Key Technical Innovations

1. **Dynamic Pipe Configurator (B2B):** algorithms calculate exact bypass percentages, cup hardness (Shore A), and wear-rates from line pressure and fluid properties.
2. **WebGL 3D Pipe Anomaly Visualizer:** high-performance browser rendering of degradation heatmaps with no heavy desktop software.
3. **Offline Field Inspection Mode:** Service Workers let field teams at remote pig launchers/receivers record logs when satellite or cellular signals are down.
4. **Automated Structural Compliance:** ASME B31G and Modified B31G engines convert raw millivolt sensor spikes into Safe Operating Pressure numbers.

06 3-Month Delivery Plan

Development runs for **3 months**, with the platform **ready for go-live by the end of Month 3**. Work is split into a B2B track and a B2C track in each month, with shared foundations (accounts, multi-tenancy, payments, cloud infrastructure) built first so both tracks move in parallel.

3 months	Month 3	2 tracks	9
Development duration	Go-live ready	B2B and B2C in parallel	Revenue streams live

Month	B2B Track	B2C Track	Month-End Outcome
Month 1 Foundation & Marketplace	• Interactive Pig & Tool Sizing Engine • Vendor catalog and dropship inventory • Multi-currency B2B checkout • Manufacturer onboarding	• Shared platform foundation: accounts, roles, multi-tenancy, cloud setup • Prosumer rental kit portal and deposit flow • Property owner and facility manager profiles	• B2B marketplace live in staging • Take-rate (8–15%) and manufacturer fee flows ready • B2C rental flow demo-ready
Month 2 Data & AI Engines	• Multi-format sensor file parser (MFL/Caliper) • WebGL 3D pipe degradation viewer • Automated ASME B31G / CGR calculations • Mileage SaaS subscription billing	• AI video and acoustic defect classification engine • “Health of Line” Certificate generation • Pay-per-report checkout ($49–$99)	• Pay-per-run triage ($5k–$20k) and SaaS billing ready • AI defect reports working end to end
Month 3 Escrow, Hardening & Go-Live	• Offline PWA sync for field engineers • Tool tracking and HaaS rentals • Enterprise pilot onboarding	• Contractor bidding and referral commissions (10%) • LineAssure milestone escrow (2.5%) • Contractor vetting flow	• SOC 2 readiness and penetration testing • User acceptance testing and fixes • **Production go-live**

Go-live: by the end of Month 3 all five B2B and four B2C revenue streams are built, tested, and deployed to production, ready for customers.

SOC 2 readiness covers controls, policies, and documentation. A formal SOC 2 audit and the independent penetration test are performed by third parties (see Section 08), so their timing depends on the provider’s availability.

07 Financial Projections (Year 1 to 3)

Projected platform revenue once all streams are live:

Revenue Stream	Year 1	Year 2	Year 3
B2B Pipeline SaaS (mileage ARR)	$180,000	$620,000	$1,850,000
B2B pay-per-run triage fees	$120,000	$480,000	$1,200,000
B2B marketplace commissions (12%)	$95,000	$380,000	$950,000
B2C diagnostic rentals & AI video	$45,000	$210,000	$620,000
B2C contractor job referrals (10%)	$60,000	$290,000	$880,000
Total projected annual revenue	**$500,000**	**$1,980,000**	**$5,500,000**

Projections are illustrative estimates based on the pricing assumptions in Section 04 and are not a guarantee of results.

08 Investment & Pricing

Development Fee

Item	Scope	Fee (NGN)
Total Development Fee	Design, engineering, testing, and deployment of the B2B and B2C platform as described in Section 06, over a 3-month development period, ready for go-live by the end of Month 3	**NGN 5,000,000**

Pricing flexibility: The Development Fee of NGN 5,000,000 is slightly negotiable, subject to final scope confirmation. Third-party service costs are separate and are listed below.

Payment Schedule

Milestone	Share	Amount (NGN)	Due
Project commencement (Month 1)	80%	4,000,000	Upfront, before work begins
Project completion (Month 3)	20%	1,000,000	On go-live and handover
Total	**100%**	**5,000,000**	

Third-Party Costs

The platform relies on external services. Their charges are **not included** in the Development Fee. They are billed by each provider directly to the client (accounts are opened in the client's name), so the client keeps ownership and control. Figures are indicative estimates in USD and vary with usage and provider pricing at the time of purchase.

Service	Purpose	Typical Providers	Indicative Cost (USD)
Cloud hosting & compute	Application servers, APIs, background workers	AWS, DigitalOcean	$150 – $600 / month
Managed database & cache	Operational data, sessions, queues	MongoDB Atlas, managed PostgreSQL, Redis	$60 – $300 / month
Object storage & CDN	ILI sensor files, inspection videos, reports	AWS S3, Cloudflare R2	$30 – $200 / month
Maps & geospatial	GPS and depth mapping, contractor matching	Mapbox, Google Maps Platform	Usage-based, $0 – $250 / month
AI / computer vision	Video and acoustic defect classification	OpenAI, Google Cloud Vision, or self-hosted GPU	Usage-based, $100 – $800 / month

Service	Purpose	Typical Providers	Indicative Cost (USD)
Payments & escrow	B2B checkout, LineAssure escrow, payouts	Stripe, Paystack, Flutterwave	Approx. 1.5% – 3.9% per transaction
Email, SMS & notifications	Order updates, alerts, OTPs	SendGrid, Twilio, Termii	$20 – $150 / month
Domain, DNS, SSL & WAF	Branded domain and web security	Cloudflare, Namecheap	$15 – $60 / month, domain about $15 / year
Monitoring & error tracking	Uptime, logs, performance alerts	Sentry, Grafana, Datadog	$30 – $150 / month
Identity verification (optional)	Contractor and manufacturer vetting	Smile ID, Dojah	$0.50 – $3 per check
Penetration testing	Independent security assessment (Month 3)	Independent security firm	$3,000 – $15,000 one-time
SOC 2 audit (optional)	Formal compliance attestation after launch	Vanta or Drata plus licensed CPA auditor	$15,000 – $50,000+ one-time

Estimated recurring run cost at launch: approximately **$400 – $2,500 per month** across hosting, data, AI, maps, and messaging, scaling with usage. One-time security and compliance items are additional. Developer tooling (source control, CI/CD, design) is covered by the Developer.

Payment Details

Bank	FCMB (First City Monument Bank)
Account Name	Marquis Abah
Account Number	1047892718
Currency	Nigerian Naira (NGN)
Payment Reference	Pipeline Platform: Upfront (80%) / Completion (20%)

Terms

- The 80% upfront payment is due before work begins. The remaining 20% is due on project completion and handover, targeted for the end of Month 3.
- This proposal and its pricing are valid for 30 days from October 31, 2026.
- Third-party costs are paid directly by the client to each provider and are outside the Development Fee.
- Any work outside the scope in Section 06 will be quoted separately and agreed in writing before it starts.

09 Conclusion & Approval

The pipeline and infrastructure diagnostic space is primed for disruption. Legacy companies like GE/Baker Hughes, GeoCorr, and Enduro have established hardware dominance, but their **software delivery, customer onboarding, digital procurement, and commercial accessibility are a decade behind.**

This end-to-end platform bridges heavy industrial pipeline integrity and commercial/consumer line diagnostics, creating a recurring, multi-channel revenue powerhouse.

Project Approval & Sign-Off

To commence **development** (3 months to go-live), please authorize below. By signing, the client agrees to the scope, fee, payment schedule, and terms in this proposal.
